QUICK GUIDE TO GERMINATING & PLANTING

Wrap seed in paper dampened towel.

Place in a plastic bag or container.

Place this in a warm spot for 3 – 5 days.

The humidity must be high, cover with lid to trap humidity.

If you have a heated fish tank or esky with fish tank heater float these seeds in the bag or container on top of water.

Fish tanks are a great germinator.

When the seeds germinate plant out into pots.

Pots can be made from newspaper rolled around a wine bottle. Paper will rot in ground after transplanting.

Transfer to garden when there is about 4 leaves.

Seeds wrapped in damp paper toweling floating on top of heated water.

Place into pot with good potting mix at about this stage of germination
